

Problem:

My light bulb has burnt out or is flickering.

Solution:

- 1) Turn the light switch off.
- 2) Wait at least 5 minutes for bulbs to cool off.
* Bulbs can be very hot to the touch.
- 3) Grab a step ladder or other sturdy object to get access to the light fixture.
- 4) Remove fixture cover by unscrewing retainer at bottom.

- 5) Gently unscrew bulbs from fixture

- 6) Gently screw new bulbs into fixture.
* Do not exceed rated watts printed on fixture.
- 7) Test lights by turning on the switch.
Once tested, turn switch off again.
- 8) Replace fixture cover by replacing cover and screwing retainer cap back on.
