

Problem:

One or both of my bathroom exhaust fans stopped working.

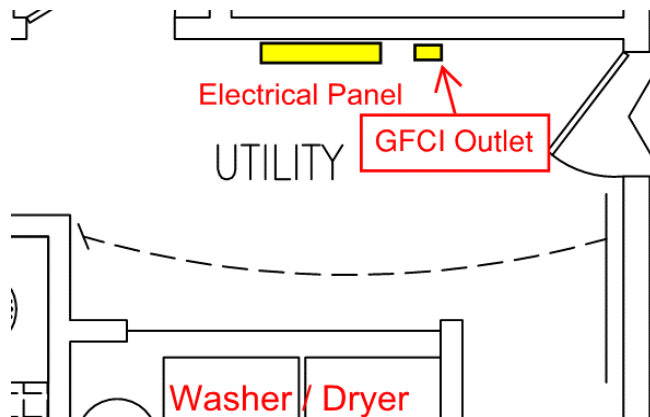

Solution:

1) Shut exhaust fan switch off in both bathrooms.

2) Go to the laundry room on the first floor.

3) Find the GFCI power outlet located below the electrical panel

4) Push the reset button on the GFCI power outlet

5) Go back to the bathroom and test the fan to see if it turns on when you flip the switch to on.

6) If fan still will not work, please notify Management.
